Response to Arguments

Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-7 and 9-16 rejected under 35 U.S.C. 103(a) as being unpatentable over Rader and further in view of Shimada US 5,394,166.

1. As per claim 1,

Rader in (Col. 3, line 48-52) discloses that the full display mode can be automatically activated when the cover is opened and the partial display mode can be automatically entered when the cover is closed responsive to the inputs from the sensors. Rader in abstract discloses that partial display field, or area, is controlled to generate images in a first operating mode to conserve power. Rader in (Col. 3, line 44-45) discloses that the CPU responds to these sensors to control the display panel to display an image only in the partial display field. As applicant discloses on page 7 of remarks, that Rader does not explicitly (clearly) specify changing the position of first part of the display element at set intervals. However Shimada illustrates clearly in Figs. 6A-6D. And also Shimada in abstract discloses that a display screen at all times saving the power for displaying, thus, there is provided a device on which appropriately edited data is displayed in a

Page 3

Application/Control Number: 09/579,626

Art Unit: 2672

small screen (interpretation: less power to a display is corresponding to less burn-in to a display). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Shimada into Rader, in order to reduce the display area of Rader in Fig. 4. A person skilled in the art could integrate the step of display compressed image data from Fig. 5 of Shimada's flow chart into the Rader's Fig. 4 between steps 200 and 424. The two different modes of display will appear as a result.

2. Claim 2,

Rader discloses in (Col. 3, line 44-45) that the CPU responds to these sensors to control the display panel to display an image only in the partial display field.

Rader discloses in (Con. 8, line 21-23) that if 4 bit gray scale is employed the image capable of being rendered is reduced by a factor of four. This skill is very well known in the art.

3. Claim 3,

Rader discloses in (col. 8, line 30-32) the partial display field can be placed at any region of the full display screen area by selecting the rows and columns to be controlled by the pixel off signal.

4. Claim 4,

Rader discloses in (col. 8, line 30-32) that the partial display field can be placed at any region of the full display screen area by selecting the rows and columns to be controlled by the pixel off signal.

5. Claim 5,

Rader discloses in (col. 8, line 60-65) that Additionally, the output switch can be controlled so as to blank different rows and columns, thus changing the location of the partial display field.

Application/Control Number: 09/579,626 Page 4

Art Unit: 2672

By changing the blanked columns and rows, the partial display field sourced from the second buffer can be placed in different areas of the display screen.

6. Claim 6.

Rader discloses the amount of rows and columns in the partial display field see rejection of claim

7. Claim 7,

Rader discloses the amount of rows and columns in the partial display field see rejection of claim.

8. Claim 9,

Rader discloses in (Col. 3, line 40-44) that the CPU in Fig. 3 also has an internal sensor (not shown) that detects inactivity. If the CPU receives no inputs from the user input and RF circuit for a predetermined period of time, the CPU can enter a sleep mode.

9. Claim 10,

Rader discloses in Fig. 1 and 2 a mobile station.

10. Claim 11,

Rader in (3, line 44-52) discloses that the CPU in Fig. 3 (segment # 312) responds to these sensors to control the display panel to display an image only in the partial display field when the phone enters a "sleep mode" due to inactivity of the processor, or when the phone is active while the cover 108 is closed. The full display mode can be automatically activated when the cover 108 is opened and the partial display mode can be automatically entered when the cover 108 is closed responsive to the inputs from the sensors. As applicant discloses on page 7 of remarks, that Rader does not explicitly (clearly) specify changing the position of first part of the display element at set intervals. However Shimada illustrates clearly in Figs. 6A-6D. Thus, it would have

Art Unit: 2672

been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Shimada into Rader, in order to reduce the display area of Rader in Fig. 4. A person skilled in the art could integrate the step of display compressed image data from Fig. 5 of Shimada's flow chart into the Rader's Fig. 4 between steps 200 and 424. The two different modes of display will appear as a result.

11. Claims 12,

As for "A device according to claim 1, wherein the changing means is arranged to change the information displayed on the first part of the display element", Rader in (Col. 3, line 44-45) discloses that the CPU responds to these sensors to control the display panel to display an image only in the partial display field (the first part of display).

12. Claim 13,

As for "An electronic device comprising: a display element to display information, wherein said display element has two modes, a full-screen mode to use the entire display element to display a first information and a partial screen mode to use a first part of the display element in which partial screen mode a second part of the display element is switched off; means for switching the device into energy conservation mode by switching the display element to said partial screen mode; means for controlling the display element during energy conservation mode to display information on said first part; and changing means for changing the position of the first part of the display element on the display element at set intervals in order to avoid display burn-in".

Rader discloses in (Col. 3, line 48-52) that the full display mode can be automatically activated when the cover is opened and the partial display mode can be automatically entered when the cover is closed responsive to the inputs from the sensors. Rader discloses in abstract that partial

Page 5

Art Unit: 2672

display field, or area, is controlled to generate images in a first operating mode to conserve power. Rader discloses in (Col. 3, line 44-45) that the CPU responds to these sensors to control the display panel to display an image only in the partial display field. As applicant discloses on page 7 of remarks, that Rader does not explicitly (clearly) specify changing the position of first part of the display element at set intervals. However Shimada illustrates clearly in Figs. 6A-6D. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Shimada into Rader, in order to reduce the display area of Rader in Fig. 4. A person skilled in the art could integrate the step of display compressed image data from Fig. 5 of Shimada's flow chart into the Rader's Fig. 4 between steps 200 and 424. The two different modes of display will appear as a result.

13. Claim 14,

As for "A device according to claim 13, wherein the changing is arranged to change the position of said first part of the display element on the display element". Rader discloses in (Col. 3, line 44-45) that the CPU responds to these sensors to control the display panel to display an image only in the partial display field (the first part of display).

14. Claim 15,

As for "A method for decreasing the energy consumption of an electronic device, wherein a first part of the display element is used and a second part of the display element is switched off to conserve energy; information is presented on the first part of the display element; and the method further includes changing information displayed on the first part of the display element at set intervals in order to avoid display burn-in", Rader discloses in (Col. 3, line 48-52) that the full display mode can be automatically activated when the cover is opened and the partial display

Page 6

Art Unit: 2672

mode can be automatically entered when the cover is closed responsive to the inputs from the sensors. Rader discloses in abstract that partial display field, or area, is controlled to generate images in a first operating mode to conserve power. Rader discloses in (Col. 3, line 44-45) that the CPU responds to these sensors to control the display panel to display an image only in the partial display field. As applicant discloses on page 7 of remarks, that Rader does not explicitly (clearly) specify changing the position of first part of the display element at set intervals.

However Shimada illustrates clearly in Figs. 6A-6D. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Shimada into Rader, in order to reduce the display area of Rader in Fig. 4. A person skilled in the art could integrate the step of display compressed image data from Fig. 5 of Shimada's flow chart into the Rader's Fig. 4 between steps 200 and 424. The two different modes of display will appear as a result.

15. Claim 16,

As for "A method according to claim 15, further comprising changing the position of the first part of the display element on the display element", Rader discloses in (Col. 3, line 44-45) that the CPU responds to these sensors to control the display panel to display an image only in the partial display field (the first part of display).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Javid A Amini whose telephone number is 703-605-4248. The examiner can normally be reached on 8-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi can be reached on 703-305-4713. The fax phone number for the organization where this application or proceeding is assigned is 703-746-8705.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-0377.
